## Quadsaw

## Fenceline Trimming

Increase field size

Control growth competition

Avoid equipment damage

## Economical Fence Row Trimming!

The Quadsaw is mounted on the frontend loader or wheel loader arm and the horizontal and vertical working angles are hydraulically adjusted so that cutting angles up to 90 degrees or parallel to the ground are possible.

We can trim up to 17 ft in height and can cut trees and limbs up to 6" in diameter. The 4 saw blades on the Quadsaw are allowing a clean cut without damaging the remaining tree.

Generally 1 pass around the field edge cleans up all over hanging branches and limbs. After an initial clean up a trimming every 3 years should keep regrowth of trees and brush under control.

The cut off material can be cleaned up and pushed up to piles for burning or composting with any loader and fork. The loader can follow right behind the Quadsaw, so that fields are cleared and ready for following fieldwork within hours.
